TOYO Corporation

TOYO provided demonstration jointly with Seiko Solutions at INTEROP TOKYO
- Netwiser SX-3550 blocked web application attack traffic transmitted by Avalanche -

TOYO Corporation（HQ： Chuo-ku Tokyo, President and CEO: Masaru Gomi）provided a joint demonstration with Seiko Solutions (HQ： Chiba-shi Chiba, President: Takaaki Yamamoto) at INTEROP TOKYO 2013, one of the largest network computing exhibitions in Japan. Both Seiko Solutions and TOYO exhibited their latest solutions and presented a joint demonstration using these solutions at their respective booths.

[Demonstration details]

- The Avalanche, the application performance tester of Spirent Communications in the US, exclusively represented by TOYO in Japan, transmitted to Seiko Solutions' application firewall, "Netwiser SX-3550" a mixture of normal traffic and attack traffic including cross site scripting, SQL injection and other cyber-attack traffic against web applications.

- "Netwiser SX-3550" identified cyber-attack traffic to a web application server based on the patterns of the traffic transmitted on the network and blocked only the attack traffic while allowing all normal traffic to pass through it (please see the illustration below for more details).

Interop Tokyo 2013 ShowNet Demonstration

[About Spirent Communications]

Spirent develops innovative test solutions for the engineers working within the communications industry that allow them to evaluate the performance of the latest technologies, infrastructure and applications to be deployed worldwide. We also provide tools for service technicians and field test engineers to improve network quality and make troubleshooting of live networks efficient and effective.

Spirent employs over 1,400 employees in over 25 locations in more than 12 countries. Our communications businesses serve 1,400 customers worldwide.

TOYO is the exclusive distributor of Spirent Communications. For more information, please visit Spirent's website at http://www.spirent.com.

[About Avalanche]

The Avalanche is an application performance tester that enables users to conduct application –level stress tests on various network devices such as firewalls, load balancers, IDS/IPS or application servers. Since its launch in 2001, it has been the industry standard and used by network equipment manufacturers, communication carriers, service providers, system integrators and enterprises around the world.

[About TOYO Corporation]

TOYO Corporation has been providing researches and developers in Japan with cutting-edge "measuring tools" imported from overseas with the keywords "technology and information" in mind to contribute to the technological development in Japan since its foundation in 1953. TOYO's various efforts - support services such as repairs, calibrations and technical support and development of its own products in its Electro-technical center and technical seminars and training at its Technology Interface Center - are backed by the technical capabilities of engineers that account for 80% of its 400+ employees. TOYO will continue to strive to accomplish our mission as a technology interface in the future. For more details, please visit its website at http://www.toyo.co.jp.

[About " Netwiser SX-3550", a load-balancer with WAF (Web Application Firewall)]

The Netwiser SX-3550 is a model with WAF integrated with the SSL accelerator and load-balancing function for improved security. This is a purely Japanese-made appliance using SiteGuard Lite of JP-Secure as a WAF engine, which has been used by a wide range of customers from enterprises to service providers.
