## TOYO provided demonstration jointly with Dell at INTEROP TOKYO
## - Dell Sonicwall SuperMassive E10800 blocked application traffic and cyber-attack traffic generated by Spirent Studio

TOYO Corporation（HQ： Chuo-ku Tokyo, President and CEO: Masaru Gomi）provided a joint demonstration with DELL Japan (President: Kohri Shinichiro) at INTEROP TOKYO 2013, one of the largest network computing exhibitions in Japan. Both Dell and TOYO exhibited their latest solutions and presented a joint demonstration using these solutions at their respective booths.

[Demonstration details]

● The next-generation security test tool, Spirent Studio of Spirent Communications, exclusively represented by TOYO in Japan, generated application traffic including traffic for Skype, YouTube and LINE and targeted attack traffic against the vulnerabilities of OS and applications. It transmitted a mixture of attack traffic and normal traffic to Dell's next-generation firewall "Sonicwall SuperMassive E10800".

● With the patented RFDPI (Reassembly-Free Deep Packet Inspection) technology, the Dell Sonicwall SuperMassive E10800 successfully blocked cyber-attack traffic, allowing high-load normal traffic to pass through it. It kept ShowNet perfectly secure while handling traffic at 10Gbps or higher (see the illustration below for more details).

**[About Spirent Communications]**

Spirent develops innovative test solutions for the engineers working within the communications industry that allow them to evaluate the performance of the latest technologies, infrastructure and applications to be deployed worldwide. We also provide tools for service technicians and field test engineers to improve network quality and make troubleshooting of live networks efficient and effective.

Spirent employs over 1,400 employees in over 25 locations in more than 12 countries. Our communications businesses serve 1,400 customers worldwide.

TOYO is the exclusive distributor of Spirent Communications. For more information, please visit Spirent's website at http://www.spirent.com.

**[About Spirent Studio]**

Spirent Studio is an appliance designed specifically for emulating diversified and sophisticated cyber-attacks and evaluating the robustness of the network security. Supporting the Fuzzing test that induces vulnerabilities on the network, the attacks to known vulnerabilities including malware, and the DDoS attacks, this product helps you efficiently evaluate security devices such as UTM, IPS/IDS and firewalls. It also enables you to perform various tests for verifying the DPI function or optimizing the security policy by generating traffic of Skype, LINE, YouTube and other applications.

**[About TOYO Corporation]**

TOYO Corporation has been providing researches and developers in Japan with cutting-edge "measuring tools" imported from overseas with the keywords "technology and information" in mind to contribute to the technological development in Japan since its foundation in 1953. TOYO's various efforts - support services such as repairs, calibrations and technical support and development of its own products in its Electro-technical center and technical seminars and training at its Technology Interface Center - are backed by the technical capabilities of engineers that account for 80% of its 400+ employees. TOYO will continue to strive to accomplish our mission as a technology interface in the future. For more details, please visit its website at http://www.toyo.co.jp.

**[Dell SonicWALL SuperMassive E10000 Appliance Series ]**

The Dell™ SonicWALL™ SuperMassive™ E10000 Series is Dell's Next-Generation Firewall platform for the largest networks, delivering scalability, reliability and deep security at multi-gigabit speeds. Culminating from years of research and development, the SuperMassive E10000 Series combines the highest performance with the most comprehensive protection. Designed to meet the needs of data centers, carrier, and service provider deployments, the E10000 Series is field upgradeable to grow along with network demands. With a massive multi-core architecture and patented Reassembly-Free Deep Packet Inspection™ (RFDPI) technology, SuperMassive offers industry-leading intrusion prevention, malware protection, SSL inspection and application control.

- Massively scale up to 96 processing cores
- 40+ Gbps of Firewall throughput
- 30+ Gbps of Application Inspection with Intrusion Prevention
- 10+ Gbps of Anti-Malware protection against millions of malware threats

－Ultra-low latency Deep Packet
